

ABSTRACT OF THE DISCLOSURE

[0067] Embodiments of the present invention include a method and apparatus for communication of infrared pulse sequences, typically emitted by remote control units associated with audio/video equipment, across a wired or wireless home network. One embodiment of the invention allows one audio/video device to receive a data code sequence from a remote control unit programmed to communicate with another audio/video device and pass on to other audio/video device messages/commands to control the second audio/video device.
